VINCENT MULWA MUNYALO

PYTHON SOFTWARE ENGINEER | FULL-STACK DEVELOPER

Nairobi, Kenya | +254 712 897 106 | vmulwah@gmail.com

GitHub: https://github.com/crypto-vin | Portfolio: https://crypto-vin.github.io/

PROFESSIONAL SUMMARY

Python Software Engineer and Full-Stack Developer experienced in building web applications, REST APIs, browser automation, and data-processing workflows. Applied Python, Flask, Django, FastAPI, SQL, React, Docker, cloud platforms, and CI/CD pipelines to deliver software solutions. Contributed to an API improvement that reduced measured response time from 900 ms to 500 ms, and automated a recurring weekly reporting workflow from 3 hours to 30 minutes. Combines software engineering practice with an Electrical and Electronics Engineering background.

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL, HTML, CSS, C, Bash
Frameworks & APIs	Flask, Django, FastAPI, REST APIs, React.js, Redux, Context API
Data & Databases	PostgreSQL, MySQL, SQLAlchemy, Firebase, Pandas, NumPy, Matplotlib, Excel
Automation	Selenium, BeautifulSoup, Scrapy, browser automation, web scraping
DevOps & Cloud	Docker, Git, GitHub Actions, GitLab CI, AWS, Azure, GCP, Apache, Nginx
UI & Hardware	Tailwind CSS, Material UI, Node.js, Arduino, Raspberry Pi

PROFESSIONAL EXPERIENCE

PLUS W. INC 株式会社 — Full Stack Engineer Intern (Tokyo) → Remote Employee (Nairobi) | January 2025 – Present

Tokyo, Japan (onsite internship, Jan–Jun 2025); Nairobi, Kenya (remote employee, Jul 2025–present)

- Contributed to API performance improvements, reducing measured response time from 900 ms to 500 ms — a 44.4% reduction.
- Developed and maintained Python APIs and backend services using FastAPI, Django, and Flask.
- Contributed to web applications designed to support approximately 2,000 concurrent users.
- Used Docker, AWS/Azure services, and CI/CD pipelines with GitHub Actions and GitLab CI to support application development and delivery.
- Built and maintained front-end features with React, Redux, Context API, Tailwind CSS, and Material UI.
- Contributed to the ongoing development of Theo, software currently in use that translates chef-selected cake options into instructions for a Baumkuchen-baking robot; operational impact has not yet been quantified.

FREELANCE PYTHON DEVELOPER — Remote | January 2020 – Present

- Automated a recurring weekly reporting workflow, reducing preparation time from 3 hours to 30 minutes — an 83.3% reduction and 2.5 hours saved per weekly cycle.
- This represents a potential saving of 130 hours per year, assuming 52 weekly reporting cycles.
- Developed web applications and REST APIs with Flask and Django, using SQL and cloud-backed data stores where appropriate.
- Built browser automation and web-scraping workflows with Selenium, BeautifulSoup, and Scrapy.
- Cleaned, analyzed, and visualized data using Excel, Pandas, NumPy, and Matplotlib; worked with MySQL, PostgreSQL, SQLAlchemy, Firebase, GCP, and AWS.

SELECTED PROJECTS

Theo — Baumkuchen Baking Robot Software

- Contributed to the ongoing development of Theo, software currently in use that translates cake options selected by a chef into corresponding instructions for a Baumkuchen-baking robot. Its development is ongoing, and measurable operational impact has not yet been established.

Trove — E-commerce Website | GitHub: https://github.com/crypto-vin/Trove

- Built an e-commerce website that allowed customers to browse products and make purchases online.

EDUCATION & CERTIFICATIONS

ALX Africa — Software Engineering Programme | Full Stack Software Engineering Trainee, Nov 2022 – Nov 2024

University of Nairobi | BSc Electrical and Electronics Engineering, 2015 – 2021

Cisco — Cybersecurity Essentials | August – November 2022
